

## Summer Internships

**Blue Planet Systems Corporation** (Blue Planet) is a cleantech company headquartered in Los Gatos, California, that is developing technology, products and services related to economically sustainable carbon capture and mineralization, whereby carbon dioxide (CO<sub>2</sub>) gas is permanently sequestered as solid carbonate in building materials for beneficial reuse.

Through its Summer Internship program, Blue Planet offers a unique opportunity for high school and/or college students to gain experience in industry. Working closely with all levels of R&D and Engineering staff, intern projects cover technology spanning a wide range of disciplines, e.g., process chemistry, materials science, geology, mineralogy, engineering (chemical, civil, structural, process), construction materials (aggregate, cement, concrete), materials handling, water treatment and technoeconomic assessment.

Many students that have been through the Summer Internship program have gone on to attend top universities as undergraduate and graduate students, or have found successful roles in industry. The program typically lasts 12-16 weeks and is flexible with different academic calendars from various institutions. Internships are in person and are based out of either Los Gatos, CA or Pittsburg, CA.

Blue Planet is at the cutting edge of the future of the green building industry, and this is an exciting opportunity for eager students to be part of a company striving to make a difference in the world by sequestering billions of tons of CO<sub>2</sub> per year in the built environment. If interested please email a pdf of your résumé and cover letter to [jobs@blueplanetsystems.com](mailto:jobs@blueplanetsystems.com) with *Summer Internship* in the subject line.
